Generated Y (from DGP Tab)

Assumed Distribution

Statistical Model

$$egin{aligned} Y_i^* &\sim \mathrm{STL}(\mu_i) \ \mu_i &= X_i eta &= eta_0 + eta_1 X_i \ Y_i &\perp \!\!\!\perp Y_j &orall i
eq j \ y_i &= egin{cases} 1 & ext{if} & y_i^* < au_0 \ 2 & ext{if} & au_0 \leq y_i^* < au_1 \ 3 & ext{if} & au_1 \leq y_i^* \ \end{cases} \ au_1 &= \exp(\gamma) \end{aligned}$$

Log Likelihood

Likelihood for data
$$y = (y_1, \dots, y_n)$$
:

$$L(eta, \gamma|y, X) = k(y) \cdot \prod_{i=1}^n [\Pr(Y_i = j)]$$

$$egin{aligned} \ln[L(oldsymbol{eta}, oldsymbol{\gamma} | y, X)] &\doteq \ln[F_{stl}(\exp(\gamma_j) | x_i oldsymbol{eta}) - \ F_{stl}(\exp(\gamma_{j-1}) | x_i oldsymbol{eta})] \end{aligned}$$

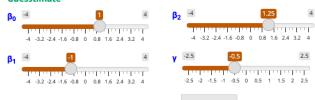

Maximum Likelihood Estimates

$$\hat{\theta} = [\hat{eta}_0, \hat{eta}_1, \hat{eta}_2, \hat{\gamma}]$$

= [-1.29, -1.11, 2.56, 0.55]

$$\hat{V}(\hat{\theta}) = \begin{bmatrix} 0.59 & 0.02 & -0.88 & 0.01 \\ 0.02 & 0.16 & -0.26 & -0.02 \\ -0.88 & -0.26 & 1.97 & 0.06 \\ 0.01 & -0.02 & 0.06 & 0.09 \end{bmatrix}$$
